

## Week 1

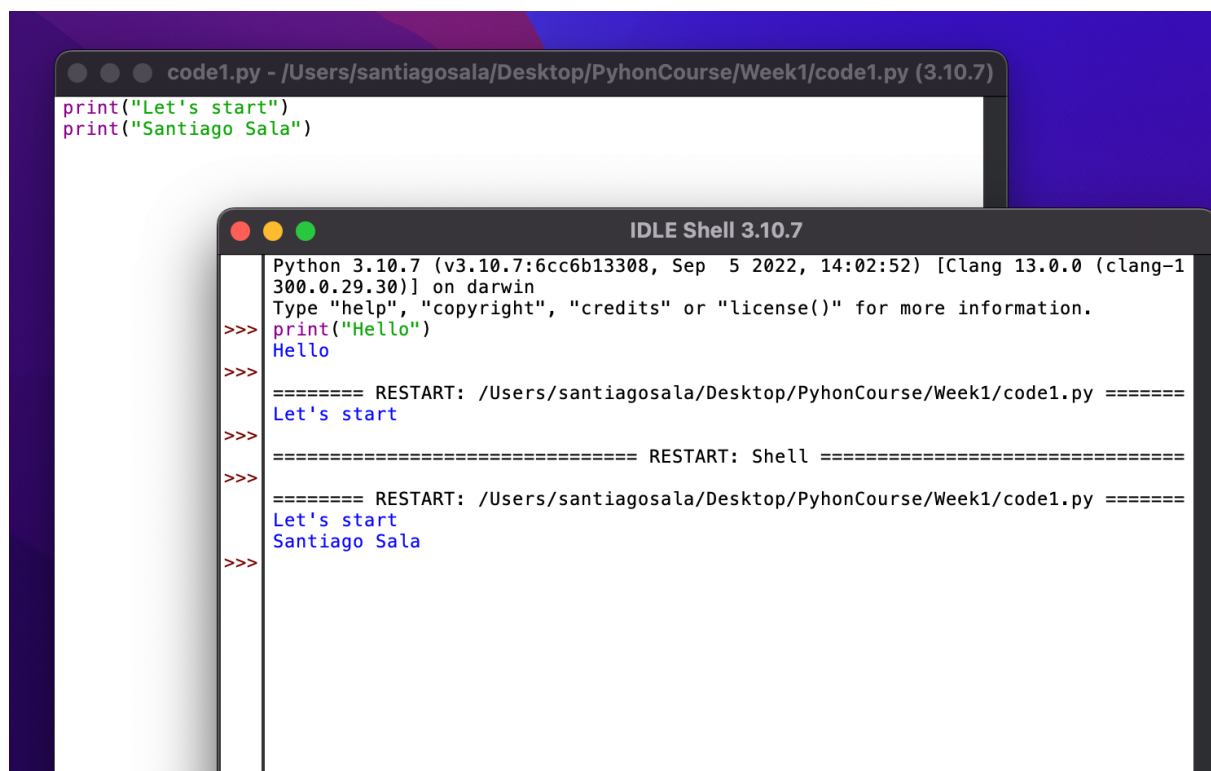

### Presentation

My own presentation was made in the discussion board in the itslearning environment. Below is a copy of what I wrote:

Hi, my name is Santiago, I am studying Business information technology at JAMK. I am second year student and have some knowledge of C#. Been living in Finland for the last 10 years and been working as a nurse for the last 5 years. Still working but part-time nowadays. I enrolled this course through campusonline to learn more programming languages. I'm hoping that after this course I can understand better the syntax of python and the best cases to use it in comparison to other languages.

### Installing Python

Installing python was pretty straight forward. Downloaded it from the Python.org. I have a mac and the installation was just pretty much clicking next until it was installed. Then I followed the instructions from the week 1 assignment and everything went as expected. The picture bellow is a proof of my results.

A screenshot of a Python IDE window titled 'code1.py - /Users/santiagosala/Desktop/PyhonCourse/Week1/code1.py (3.10.7)'. The code in the editor is:

```
print("Let's start")
print("Santiago Sala")
```

Below the editor is an 'IDLE Shell 3.10.7' window. It shows the output of the code execution:

```
Python 3.10.7 (v3.10.7:6cc6b13308, Sep 5 2022, 14:02:52) [Clang 13.0.0 (clang-1300.0.29.30)] on darwin
Type "help", "copyright", "credits" or "license()" for more information.
>>> print("Hello")
Hello
>>>
